C =Hl tan 6 is called constant of the gal21: vanometer. This instrument is called the Tangent Galvanometer because the current is proportional to the tangent of the angle of deflection. 0orrection for Many FVz ndings. 25. One method of increasing the sensitiveness of a galvanometer is to increase the number of turns of the coil. If this is done, due correction should be made in the formula. The following is the method for obtaining this correction. In Fig. 15 we have the section of a coil whose breadth is zb and thickness a. Now if n = number of turns, r = distance of any element of the coil from axis of X, p = distance of element of coil from origin, /.4 = strength of magnetic pole placed at origin, and C = strength of current, from 24...
